ILLUSTRATIVE TEXT FOR TESTING - NOT AN OFFICIAL RWANDA FDA DOCUMENT

GUIDELINES ON THE COMMON TECHNICAL DOCUMENT (CTD) FOR HUMAN MEDICINES
Version 2026-01

1. Structure
Human medicine dossiers are submitted in CTD format, in five modules.

2. Module 1: Administrative information and prescribing information
Module 1 contains the regional administrative information and the prescribing information: the summary of product characteristics (SmPC) and the patient information leaflet (PIL), with the labelling.

3. Module 2: Summaries
Module 2 contains the quality overall summary, the non-clinical overview and the clinical overview.

4. Module 3: Quality
Module 3 describes the active substance and the finished product. Section 3.2.P.8 must contain stability data that support the proposed shelf life and storage conditions. The duration of the long-term stability data must be at least as long as the proposed shelf life, unless an extrapolation is justified.

5. Module 4: Non-clinical study reports
Module 4 contains the non-clinical study reports. For well-established active substances, a literature-based non-clinical overview may be accepted.

6. Module 5: Clinical study reports
Module 5 contains the clinical study reports. For generic medicines, it must include a bioequivalence study against the reference product, with the 90% confidence intervals of the test/reference ratios for AUC and Cmax within 80.00-125.00%.
