ILLUSTRATIVE TEXT FOR TESTING - NOT AN OFFICIAL RWANDA FDA DOCUMENT

GUIDELINES ON LABELLING OF REGULATED PRODUCTS

Version 2026-01

1. Scope

These guidelines apply to the labels of all products registered by Rwanda FDA: human and veterinary medicines, food products, cosmetics and medical devices. The label submitted with an application must be the label that will be used on the market.

2. Product identification

The label must state the brand name of the product. For medicines, it must also state the name of the active ingredient (INN), the strength and the pharmaceutical form, for example "Paracetamol 500 mg tablets".

3. Storage conditions

The label must state the storage conditions, including a specific temperature or temperature range, for example "Store below 30°C" or "Store between 2°C and 8°C". General statements such as "store in a cool, dry place" or "store properly" are not acceptable on their own.

The storage conditions on the label must be the same as the storage conditions declared in the application.

4. Expiry date

The label must show the expiry date, or the format in which it will be printed, preceded by "EXP", for example "EXP: MM/YYYY". The batch number must also be shown, preceded by "Batch" or "Lot".

5. Manufacturer

The label must state the name and the full address of the manufacturer, including the country.

6. Ingredients

Food products and cosmetics must list all ingredients on the label. Food products list ingredients in descending order of weight and highlight allergens such as milk, soy, wheat (gluten), eggs, peanuts and tree nuts. Cosmetics list ingredients using INCI names.

7. Language

Labels must be in English, French or Kinyarwanda. Additional languages may be added.
