ILLUSTRATIVE TEXT FOR TESTING - NOT AN OFFICIAL RWANDA FDA DOCUMENT

GUIDELINES ON THE RELIANCE REGISTRATION PATHWAY FOR HUMAN MEDICINES
Version 2026-01

1. Purpose
A human medicine already approved by a reference regulatory authority may be registered through the reliance pathway. Rwanda FDA relies on the reference authority's assessment and inspection, so the applicant must prove that the product submitted is the same product.

2. Reference regulatory authorities
Accepted reference authorities include the European Medicines Agency, the US Food and Drug Administration, the MHRA, Swissmedic, Health Canada, the TGA, WHO Prequalification and the EAC joint assessment.

3. Declaration of sameness
The applicant submits a declaration of sameness, following the Rwanda FDA template. It states the reference authority and the product's registration number with that authority, names the manufacturing site, and declares that the product submitted to Rwanda FDA is identical to the approved product in formulation, manufacturing site, manufacturing process, specifications and packaging. It is signed and dated by the marketing authorization holder.

4. GMP certificate
A Good Manufacturing Practice certificate issued by the reference regulatory authority must be submitted for every manufacturing site. It must name the site and must be valid on the date of submission. Certificates issued by other authorities are not accepted for this pathway.

5. Letter of authorization
The applicant submits a letter, following the Rwanda FDA template, authorizing the reference regulatory authority to share its assessment and inspection reports about the product with Rwanda FDA. A letter that only confirms the product's approval is not sufficient.
